

lockedinnn — brand design system

Brand overview

Name: lockedinnn (always lowercase, always with three n's)

Slogan: Level up, get paid!

What it is: A marketplace where young people take real paid jobs from real companies, and unlock better-paid work by building verified skills.

Positioning: Warm, credible, and earned rather than techy or hype-driven. The brand should feel like a stamp of approval, not a security app or a generic SaaS tool — every real job and every badge is something a young person worked for and got confirmed, the way a wax seal confirms something is genuine.

Logo

Concept: a circular pressed wax seal. A small laurel wreath sits centered in the upper portion, with the wordmark "lockedinnn" stamped directly beneath it. The outer edge is slightly irregular, like hand-pressed wax, with one or two small wax droplet details near the edge.

Why this mark: the wreath is the traditional "approved/certified" symbol, and the wax-seal format itself says "confirmed, genuine, stamped" — reinforcing that jobs and skill badges on the platform are real, not hype.

Status: concept finalized; final high-resolution, fully isolated file still needs to be generated (see File checklist below). The current reference image was pulled from a multi-seal grid and has a flaw at the edge where it overlapped a neighboring seal, so it should not be used as a final asset.

Clear space: keep empty space around the seal equal to at least the width of the wax droplet detail, on all sides, so it never touches a container edge or other content.

Minimum size: do not use below roughly 32px — the wreath and wordmark both lose legibility at smaller sizes. A simplified flat version (see checklist) should be used instead for favicons and tiny app icons.

Color palette

Core brand colors (the logo itself uses only these two):

Role	Name	Hex	Use
Primary	Cosmic red	#7A1F2B	Logo, headlines, primary buttons, pay amounts, badges
Background	Off-white / parchment	#FAF7F0	Page background, seal background, light surfaces

Extended palette for the website and app (the logo stays two-color; these round it out for UI, where more roles are needed):

Role	Name	Hex	Use
Text primary	Near-black	#221C1A	Body copy, headings on light backgrounds
Text secondary	Warm gray	#8A7F77	Captions, muted labels, timestamps
Surface	Warm card	#F1EAE0	Cards, panels, input fields sitting above the page background
Border	Soft tan	#E2D6C6	Dividers, card borders, input outlines
Success / payout confirmed	Deep forest	#2E6B4F	Paid status, approved submissions, confirmation messages
Warning / pending	Muted amber	#B8863B	Awaiting review, pending payout
Error	Brick red	#A43B3B	Form errors, rejected submissions — kept distinct from brand cosmic red so a mistake never looks like brand color

Cosmic red is reserved for brand moments and primary actions — it should not be reused for error states, so a rejected submission never reads as if something about the brand itself went wrong.

Typography

Role	Typeface	Why
Display / headlines	Fraunces	A warm serif with a slightly vintage, stamped character — echoes the wax-seal mark instead of fighting it with a cold techy sans
Body / UI	Inter	Clean, highly legible on phones, stays quiet so the display face and the cosmic red carry the personality
Numbers (pay amounts, counters)	Inter, tabular figures enabled	Keeps pay amounts aligned and easy to scan; no separate mono font needed

Both are free (Google Fonts). Use two weights per face — regular and bold — to keep the system disciplined.

Type scale (website/app):

Element	Font	Size	Weight
Hero headline	Fraunces	48–56px	Bold
Section heading	Fraunces	28–32px	Bold
Card title	Inter	18px	Bold
Body text	Inter	16px	Regular
Caption / meta	Inter	13px	Regular

Fraunces is reserved for moments that should feel like a statement — the hero headline, a section intro, a slogan placement. Inter carries everything functional, including the slogan when it appears inside the product UI rather than in marketing.

Slogan and voice

Main slogan: Level up, get paid!

When to use the "!": keep it in marketing contexts — Instagram, ads, the landing page hero, merch. Drop it inside the product itself (dashboard headers, empty states, notifications), where the calmer "Level up, get paid" reads as confident rather than like it's shouting at the user every time they open the app.

Tone of voice:

- Plain and direct, never corporate. Say what something does, not how impressive it sounds.
- Confident without hype — no fake urgency, no "don't miss out," no exaggerated claims about how much someone can earn.
- Earned, not given: language should reflect that jobs and badges are things a person worked for, not freebies.
- Sentence case everywhere — headlines, buttons, labels. Reserve capitals for the rare moment something needs real emphasis.

Examples:

Context	Good	Avoid
Empty job board	"No jobs match yet. Check back soon."	"Oops! Nothing here :("
Payout confirmed	"Paid."	"Congrats, you successfully earned money!!"
Locked job	"Unlocks with the Cold Calling badge."	"Sorry, you're not qualified for this yet."

Logo usage: do's and don'ts

Do:

- Use the seal on off-white or plain light backgrounds where the texture stays visible.
- Keep the wreath, wordmark, and wax texture intact as one unit — treat it as a single mark, not separable pieces.
- Use the simplified flat version at small sizes (favicon, app icon, anywhere under ~32px).

Don't:

- Don't recolor the seal outside cosmic red and off-white — a different color breaks the "wax seal" read entirely.
- Don't place the seal on busy photos or patterned backgrounds; it needs a calm field to read as stamped.
- Don't stretch or distort the circle into an oval to fit a layout — resize it proportionally instead.

- Don't add drop shadows, glows, or gradients behind the seal — the pressed-wax texture already carries the depth.

File checklist

Files still to produce, once the clean, fully isolated seal is generated:

- ☐ Master seal — high-resolution PNG, transparent background
- ☐ Master seal — SVG (vector, for crisp scaling on the website)
- ☐ Simplified flat version — for favicon and small app-icon use, where the embossed texture would lose legibility
- ☐ App icon — square, 512x512px, with safe padding around the seal
- ☐ Favicon — 32x32px and 16x16px, from the simplified flat version
- ☐ Horizontal lockup — seal plus "lockedinnn" wordmark plus "Level up, get paid!" slogan, for the website header and email signature
- ☐ Social profile version — square crop optimized for Instagram/TikTok profile photo circles
- ☐ Dark-background variant — in case the seal ever needs to sit on a dark surface (confirm with a design pass before using; the current mark is built for light backgrounds)
